## INTRODUCTION

Section 293 of Public Act 15-5 requires the Connecticut State Department of Education (CSDE) to provide a report on the performance of English learners (ELs) in bilingual education programs on the statewide mastery examination for the purpose of monitoring: (1) the academic progress of students in bilingual education programs; and (2) the quality of bilingual education programs offered by local and regional boards of education.

This report presents the first results of the academic growth of ELs in bilingual education programs. The traditional approach to evaluating academic performance has been to report academic achievement. However, achievement is a snapshot measurement where the students evaluated are often different from one year to the next. Therefore, this report focuses on the growth or change in achievement of the same students from one year to the next i.e., from 2014-15 to 2015-16 on the Smarter Balanced academic assessments.

Furthermore, ELs are, by definition, just acquiring English language skills - a process that research has affirmed may take several years ${ }^{1}$. Therefore, growth is the more appropriate measure to evaluate the academic development of ELs as they acquire English language skills.

## Methodology

This report utilizes the academic growth results from Connecticut's Growth Model for the Smarter Balanced English Language Arts (ELA) and Mathematics assessments from SY 2014-15 to 2015-16.

- This model is based on the Smarter Balanced vertical scale which yields scale scores that are comparable across all tested grades (3 through 8).
- It facilitates the examination of change in vertical scale scores for the same student from one year to the next. With two administrations of the Smarter Balanced assessment, the CSDE for the first time has two data points that are necessary to examine academic growth.

[^0]- Each student has an individual growth target based upon their initial vertical scale score.

Students who meet their target are considered to have demonstrated the expected amount of academic growth during the school year.

- Two growth metrics are presented in this report:

1. the growth rate which is the percentage of ELs who met their individual growth targets; and
2. the average percentage of target achieved (APTA) which is calculated by summing the percentage of the growth target achieved by each student and then dividing that sum by the total number of students ${ }^{2}$.

- The performance of ELs in bilingual educational programs in the current year ${ }^{3}$ on this growth model is compared to all other ELs that were either receiving English as a Second Language (ESL) services or whose parents refused bilingual and/or ESL services.
- Data are presented for districts with mandated bilingual educational programs (pursuant to P.A. 15-5 Section 286(b)) during SY 2015-16 and that also had 20 or more bilingual students with Smarter Balanced growth results.

## Results

Overall, English Learners in bilingual educational programs demonstrate similar academic growth on the Smarter Balanced ELA and Mathematics assessments as compared to other ELs.

- ELA: 33.1 percent of ELs in bilingual educational programs met their growth target and on average, those students achieved 59.7 percent of their respective targets compared to 30.7 percent and 57 percent respectively for other ELs. (Appendix - Table 1) ${ }^{4}$.

[^1]- Mathematics: 35.2 percent of ELs in bilingual educational programs met their growth target and on average, those students achieved 56.8 percent of their respective growth targets, compared to 36.0 percent and 58.0 percent respectively for other ELs (Appendix - Table 1$)^{5}$.
- Grade: Growth by grade revealed similar results for ELs in bilingual programs when compared to other ELs in both ELA and Mathematics.

## CONCLUSION

The first results show that there is not an overall statewide difference in the growth achieved by ELs in bilingual educational programs as compared to other ELs. The CSDE will reach out to districts that seem to be producing better growth for bilingual students in one or both subjects, identify any effective programmatic/instructional strategies, and facilitate sharing across the state. CSDE will also closely monitor/evaluate these growth data in future years in order to support the improvement of bilingual education programs and accelerate the academic growth of ELs in those programs.
